

Dynamic Compression Made Simple

by Linda McCarthy and Dona Mae Cairns

Finer Points

Dynamic Compression is XanGo's best kept secret. It not only applies to the Unilevel Commission checks as shown on page 1, but also applies to the PowerStart Commissions and Global Bonus Pool checks.

PowerStart Commission

The PowerStart Commission is limited to the first ten (10) cases (or 1,000 CV) of an Initial Order. Any remaining Commission from Initial Orders larger than 10 cases will be paid out as UniLevel Commission.

PowerStart Basic (No ADP)- If you are not on ADP but have 100PV, you are qualified to receive a 20% PowerStart Commission on each of your enrollees Initial Orders but you are not qualified to receive Dynamic Compression. The other available 10% of the PowerStart Commission is Dynamically Compressed up past you to the 1st person in your *Sponsorship Line* who is on a 2 case ADP and has 200PV.

PowerStart Plus (1 Case ADP)- If you are on a 1 case ADP and have 100PV, you are qualified to receive a 30% PowerStart Commission on each of your enrollees Initial Orders but you will not receive Commissions on your 2nd level enrollees. The 15% PowerStart Commissions on your 2nd level enrollees Initial Orders will be *Dynamically Compressed* up past you (and anyone else who is not on a 2 case ADP) until it reaches the first person in your *Sponsorship Line* who is on a 2 case ADP with 200PV.

PowerStart Double Depth (2 Case ADP)- If you are on a 2 Case ADP and have 200PV, you are qualified to receive a 30% PowerStart Commission on each of your enrollees Initial Orders *and* you are qualified to receive a 15% PowerStart Commission on each of your 2nd level enrollees Initial Orders, *Dynamically Compressed*, which means...

If you are the 1st distributor on a 2 case ADP with 200PV in your *Sponsorship Line* above any Initial Orders, you qualify to receive the *Dynamically Compressed* 15% Second Level Commissions on all of those orders. This applies to each and every leg in your business.

Global Bonus Pool checks are based on *Dynamically Compressed* GV3, GV6 and GV9 volume for the 3 month qualification period.
